Second Semester M.Tech. Degree Examination, July/August 2021 Finite Element Methods

Time: 3 hrs.

Max. Marks: 100

Note: Answer any FIVE full questions.

- 1 a. Write a short notes on FEM, applications and limitations. (10 Marks)
 b. Explain the convergence criteria in FEM with requirements. (10 Marks)
- 2 a. Briefly explain the steps involved in FEM. (08 Marks)
 b. The Fig.Q2(b) shows a bar fixed at both ends subjected to an axial load as indicated. Determine the displacement at loading point and the corresponding stress.

Fig.Q2(b)

(12 Marks)

- 3 a. Derive the stiffness matrix for bar element. (06 Marks)
 b. A bar is loaded as shown in Fig.Q3(b), $E = 200\text{GPa}$ by using penalty method find :
 i) Nodal displacements
 ii) Reactions at the supports
 iii) Stresses in each element.

Fig.Q3(b)

(14 Marks)

- 4 a. Derive the stiffness matrix to 3D truss element. (10 Marks)
 b. For a truss element shown in Fig.Q4(b) determine the nodal displacement, take $A = 200\text{mm}^2$; $E = 200\text{GPa}$.

Fig.Q4(b)

(10 Marks)

- 5 a. Derive the shape function for 4 noded quadrilateral elements. (10 Marks)
 b. Explain isoparametric, subparametric and super parametric elements with examples. (10 Marks)

Important Note : 1. On completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages.
 2. Any revealing of identification, appeal to evaluator and /or equations written eg, 42+8 = 50, will be treated as malpractice.

- 6 a. Derive the shape function of quadratic quadrilateral 9-noded 2D element. (10 Marks)
 b. Derive the shape function for Hexa-8 3D element. (10 Marks)
- 7 a. Explain the FE formulation for triangular plate element. (08 Marks)
 b. Explain classical thin plate theory for shell and plate elements. (12 Marks)
- 8 Give the detail FE formulation of :
 a. Flat element
 b. Curved elements
 c. Cylindrical elements
 d. Conical shell elements. (20 Marks)
- 9 a. Derive the mass matrix for CST element. (10 Marks)
 b. Derive the mass matrix for truss element. (10 Marks)
- 10 Find the eigen values and eigen vector for stepped bar when it is subjected to axial vibration with fixed free end condition as shown in Fig.Q10.

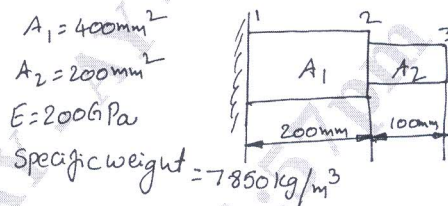

Fig.Q10

(20 Marks)
