ABSTRACT

Education is tool that provides knowledge, information, skill, technique and enable one to know their rights and duties towards society. It gives the knowledge of the world around us. It develops in us a perspective of looking at life. It is important element in evolution of country.

In a country there are numerous schools available for students who are physically and mentally normal. But when it comes to another part of the population living in the same society who is handicapped, there education becomes the matter of concern. To learn, read and right is also the basic right of the people who are blind, deaf or dumb.

As designer our responsibility is to sought out the life struggles and make it easier for people. As a project for the seventh semester the college and the faculty proposed a challenge for the students. The proposal came for designing of two types of school – school for blind & kinder garden school. Well, I feel privileged to take up the project for the designing of blind school

The studio project is focused on the development of blind school. the institutional project started right away from the research and implementing it in a right way. understanding the blind and its way of seeing the world is the primary point to look all through the project. empathizing oneself to that condition can really help to ideate and resolve the basic design problem. it can be a great initiative to help a handicapped community living in our society, and to make a change for better living.
