

ime: 3 hrs.

Fifth Semester B.E. Degree Examination, June/July 2024 Control Systems

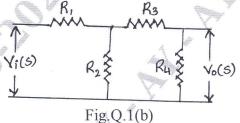

Max. Marks: 100

Note: Answer any FIVE full questions, choosing ONE full question from each module.

Module-1

- a. Define Control System? What are the requirements of a good control system? (06 Marks)
 - b. Obtain the transfer function of the given network shown in Fig.Q.1(b).

(06 Marks)

c. For the system shown in Fig.Q.1(c), draw the electrical network based on torque current analogy give all the performance equation (08 Marks)

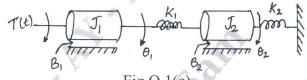

Fig.Q.1(c)

OR

a. For the mechanical system shown in Fig.Q.2(a). Draw the mechanical network and obtain the FV analogous electrical systems. (08 Marks)

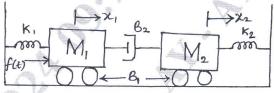

Fig.Q.2(a)

b. Derive the transfer function of an armature controlled dc motor.

(06 Marks)

c. Explain the procedure to plot the synchro pair characteristics of synchronous receiver and transmitter. (06 Marks)

Module-2

3 a. Determine $\frac{C(S)}{R(S)}$ using block diagram reduction technique shown in Fig.Q.3(a). (10 Marks)

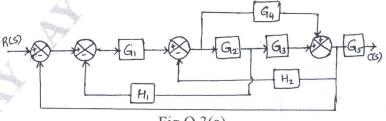

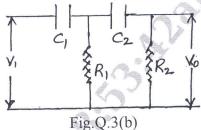

Fig.Q.3(a)

b. State Mason's gain formula. Draw the signal flow graph and find the transfer function shown in Fig.Q.3(b) (10 Marks)

OR

- 4 a. Explain the following terms in block diagram reduction:
 - i) Moving a summing point after a block.
 - ii) Moving a branch point (take off point) ahead of a block.
 - iii) Eliminating a forward path.
 - v) Interchanging a summing point and take off point. (10 Marks)
 - b. Draw the signal flow graph for the system described by the following set of equations and obtain the ratio of output x_0 to input x_1 using Mason's gain formula.

$$x_2 = x_1 - x_6$$

 $x_3 = G_1x_2 - H_2x_4 - H_3x_5$

$$x_4 = G_2 x_3 - H_6 x_6$$

$$\mathbf{x}_5 = \mathbf{G}_3 \mathbf{x}_4$$

$$x_6 = G_4 x_5$$

(10 Marks)

Module-3

- 5 a. Derive an expression for response of second order underdamped system for unit step input.
 (06 Marks)
 - b. The closed loop transfer function of a second order system is $\frac{C(S)}{R(S)} = \frac{25}{s^2 + 6s + 25}$. Find rise time, Peak time, maximum overshoot and settling time, if the system is subjected to unit step
 - input. Assume allowable steady state error as 2%. (08 Marks)
 c. State R-H criterion, explain the difficulties of R-H criterion and remedy. (06 Marks)

OR

- 6 a. Explain the performance characteristics of transient response specifications to unit step input. (06 Marks)
 - b. A unity feedback system having open loop transfer function of $G(S) = \frac{K(2S+1)}{S(S+1)(S+4)^2}$. The input r(t) = 1 + 6t is applied to the system. Determine the minimum value of K. If the steady state error is to be less than 0.1. (08 Marks)
 - c. Check the stability of the given characteristic equation using R-H criterion $S^5 + 2S^4 + 4S^3 + 6S^2 + 2S + 5 = 0$. (06 Marks)

Module-

- 7 a. Sketch the root locus plot for the system whose OLTF is given by $G(S)H(S) = \frac{K}{(S+1)(S+3)(S+5)}$. Find the value of K for which the system is stable. Also
 - show the line of RLP for damping ratio $\xi = 0.5$. (10 Marks)

2 of 3

b. Explain with circuit diagram and procedure to determine experimentally the frequency response of a second order system and evaluation of frequency domain specifications.

(10 Marks)

OR

- 8 a. A unity feedback control system with $G(S) = \frac{10(S+10)}{S(S+2)(S+5)}$ find gain and phase margin using bode plot. (10 Marks)
 - b. Derive an expression for resonant peak and resonant frequency for a second order system.
 (10 Marks)

Module-5

- 9 a. State and explain the Nyquist stability criterion. (06 Marks)
 - Explain PI and PID controller on a second order system. (08 Marks)
 - c. Explain the step by step procedure of lead compensating network. (06 Marks)

OR

- 10 a. The open loop transfer function of a control system is $G(S)H(S) = \frac{1}{S^2(S+2)}$ sketch the
 - Nyquist plot. Comment on stability.

 b. What is lead-lag compensation? Explain the procedure to design lead-lag compensation in frequency domain.

 (10 Marks)
