ABSTRACT

This research paper explores the design of an environment that caters specifically to the psychological needs of patients battling addiction, with a focus on fostering comfort and healing .It addresses the pressing drug problem in India, particularly in the context of the Northeast Indian border, which is near the "death triangle," where the prevalence of substance abuse poses significant risks to the youth .The study aims to establish a facility dedicated to educating and empowering young individuals to combat drug addiction .

Key objectives include examining the influence of various architectural forms and environments on patients' psychological states, analyzing the behaviors of individuals struggling with addiction, and creating a stimulating environment conducive to psychological recovery , the research aims to raise awareness among local communities about the dangers of drug abuse and the importance of rehabilitation efforts.
