

Important Note : 1. On completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages.
2. Any revealing of identification, appeal to evaluator and /or equations written eg, 42+8 = 50, will be treated as malpractice.

21EC744

Seventh Semester B.E./B.Tech. Degree Examination, Dec.2024/Jan.2025 Machine Learning with Python

Time: 3 hrs.

Max. Marks: 100

Note: Answer any FIVE full questions, choosing ONE full question from each module.

Module-1

- 1 a. Write a note on Supervised learning with a suitable example. (05 Marks)
- b. Write a neat diagram, explain the roadmap for building machine learning systems. (07 Marks)
- c. Write a Python code snippet to implement the perceptron object. (08 Marks)

OR

- 2 a. Write a note on classification and regression problems. (05 Marks)
- b. State the perceptron learning rule and show that it reduces error in a binary classification problem. (08 Marks)
- c. Starting from the cost function of the ADALINE unit obtain the expression for weight update. (07 Marks)

Module-2

- 3 a. Define the following terms with relevant expressions:
i) Gini impurity ii) Entropy iii) Classification error (06 Marks)
- b. With relevant expressions and diagram, explain the concept of maximizing margins using support vector machines. (08 Marks)
- c. Enlist and explain the strategies that can be employed to select meaningful features. (06 Marks)

OR

- 4 a. Write a python code to implement the sigmoid function. Compute the values from -7 to $+7$ in step of 1 and sketch the function. (06 Marks)
- b. Discuss the strategies employed to handle missing data along with the relevant python functions. (07 Marks)
- c. Explain the KNN algorithm with the steps involved. Indicate the values that the test sample ② as in Fig.Q4(c), $k = 8$, $k = 10$.

Fig.Q4(c)

(07 Marks)

Module-3

- 5 a. How does the diagnosis of the bias variance problem be carried out with the help of learning curves? Explain. (06 Marks)
- b. List the steps involved in linear discriminant analysis with relevant expressions. (08 Marks)
- c. Write the python code to import IMDb movie review database and transform words to feature vectors (assume the movie data is stored in a CSV file). (06 Marks)

OR

- 6 a. Explain K-fold cross validation with suitable diagrams and expressions. (06 Marks)
- b. Write a python pseudocode to classify data that is distributed as concentric circles. (08 Marks)
- c. Explain latent Dirichlet allocation considering the example of IMDb movie review dataset. (06 Marks)

Module-4

- 7 a. Write a code snippet to serialize the fitted scikit learn estimators. (07 Marks)
- b. Enlist the steps involved in setting up of SQLite database for data storage. (07 Marks)
- c. Write a note on correlation matrix considering Housing dataset. (06 Marks)

OR

- 8 a. Explain how a robust regression model can be built using RANSAC. (07 Marks)
- b. With relevant expression contrast the differences between ridge regression, LASSO and Elasticnet. (08 Marks)
- c. List the steps involved in setting up a web application using Flask. (05 Marks)

Module-5

- 9 a. With neat diagram and expression explain the k-means clustering. (10 Marks)
- b. Write a helper function pseudocode that loads MNIST database and returns labels and images. (10 Marks)

OR

- 10 a. Summarize the back propagation method with the help of a neat diagram. (10 Marks)
- b. Explain the process of quantification of quality of clustering using Silhouette plots. (10 Marks)
